

Street Lighting Maintenance

The City of Glendale's Transportation Department encourages citizens to report all street lighting problems (outages, flickering, etc.) as soon as they are noticed.

You will be asked to provide as specific an address as is possible related to the problem street light. For example, it would be helpful to the city if you could provide a street address and/or a corner location such as northeast, northwest, southeast or southwest.

Requesting Additional Lighting

If you feel that your street does not have adequate lighting, you may submit a written request to the Glendale Transportation Department for additional lighting.

The written request should include your name, address and a telephone number where you can be reached during regular working hours. You should also be specific in the written request about where you feel lights are needed.

Please mail your request for additional lighting to:

City of Glendale
Transportation Department
5800 W Glenn Drive, Suite 315
Glendale, AZ 85301

Reviewing Your Request

The Transportation Department will review the location at which you are requesting additional lighting and then contact you with the results of the evaluation. At the current time, the city only provides lighting for the street. The city does not light alleys, private property, or provide security lighting. If it is determined that additional street lights are required, they will be installed at no cost to you.

Let Us Help!

If you have a concern about lighting in your neighborhood, please call the City of Glendale's Transportation Department

Security Lighting Programs

Both Arizona Public Service (APS) and the Salt River Project (SRP) feature private security lighting programs. For more information on these programs and their costs, please call one of the following numbers and ask for the "Dusk to Dawn" service.

APS (602) 371-7253

SRP (602) 236-8465

**"The real value
of lighting is
finally and
directly related
to driver
safety and
comfort, and,
consequently
to a reduction in
the nighttime
accident rate."**
